

Problem List

154. Day of the Year

Easy

Topics

Companies

Hint

Given a string `date` representing a **Gregorian calendar** date formatted as `YYYY-MM-DD`, return the *day number* of the year.

Example 1:

Input: `date = "2019-01-09"`
Output: 9
Explanation: Given date is the 9th day of the year in 2019.

Example 2:

Input: `date = "2019-02-10"`
Output: 41

Constraints:

- `date.length == 10`
- `date[4] == date[7] == '-',` and all other `date[i]`'s are digits
- `date` represents a calendar date between Jan 1st, 1900 and Dec 31st, 2019.

1185. Day of the Week

Solved

Easy

Topics

Companies

Hint

Given a date, return the corresponding day of the week for that date.

The input is given as three integers representing the `day`, `month` and `year` respectively.

Return the answer as one of the following values ("Sunday", "Monday", "Tuesday", "Wednesday", "Thursday", "Friday", "Saturday").

Note: January 1, 1971 was a Friday.

Example 1:

Input: `day = 31, month = 8, year = 2019`
Output: "Saturday"

Example 2:

Input: `day = 18, month = 7, year = 1999`
Output: "Sunday"

Example 3:

Input: `day = 15, month = 8, year = 1993`
Output: "Sunday"

Constraints:

- The given dates are valid dates between the years 1971 and 2100.

179. Largest Number

MediumTopicsCompanies

Given a list of non-negative integers `nums`, arrange them such that they form the largest number and return it. Since the result may be very large, so you need to return a string instead of an integer.

Example 1:
Input: `nums = [10,2]`
Output: `"210"`

Example 2:
Input: `nums = [3,30,34,5,9]`
Output: `"9534330"`

Constraints:

- $1 \leq \text{nums.length} \leq 100$
- $0 \leq \text{nums}[i] \leq 10^9$

1360. Number of Days Between Two Dates

EasyTopicsCompaniesHint

Write a program to count the number of days between two dates. The two dates are given as strings, their format is `YYYY-MM-DD`, as shown in the examples.

Example 1:
Input: `date1 = "2019-06-29", date2 = "2019-06-30"`
Output: 1

Example 2:
Input: `date1 = "2020-01-15", date2 = "2019-12-31"`
Output: 15

Constraints:

- The given dates are valid dates between the years 1971 and 2100.

51. Sort Characters By Frequency

Medium Topics Companies

Given a string *s*, sort it in **decreasing order** based on the **frequency** of the characters. The **frequency** of a character is the number of times it appears in the string.

Return the *sorted string*. If there are multiple answers, return *any of them*.

Sample 1:

Input: *s* = "tree"

Output: "eert"

Explanation: 'e' appears twice while 'r' and 't' both appear once.

So 'e' must appear before both 'r' and 't'. Therefore "eetr" is also a valid answer.

Sample 2:

Input: *s* = "cccaaa"

Output: "aaaccc"

Explanation: Both 'c' and 'a' appear three times, so both "cccaaa" and "aaaccc" are valid answers.

Note that "cacaca" is incorrect, as the same characters must be together.

Sample 3:

Input: *s* = "Aabb"

Output: "bbAa"

Explanation: "bbaA" is also a valid answer, but "Aabb" is incorrect.

Note that 'A' and 'a' are treated as two different characters.

Constraints:

Java Auto

```
1 import java.util.*;
2
3 class Solution {
4     public String frequencySort(String s) {
5         // Count frequency of each character
6         HashMap<Character, Integer> map = new HashMap<>();
7
8         for (char c : s.toCharArray()) {
9             map.put(c, map.getOrDefault(c, 0) + 1);
10        }
11
12        // Store characters in a list
13        List<Character> chars = new ArrayList<>(map.keySet());
14
15        // Sort by decreasing frequency
```
